He was okay with the request. OSWER still wants to see the final documents.

If Randy is good with that from OSWER's perspective, I'll get folks moving on that.

I don't think they will want the spreadsheet. They have already looked at it said it is confusing to read. They only want a list of contaminants. If we just pull out that column and share, as well as note that this information and is only a list of contaminants found ... it does not provide the detail of MCL and trigger levels. We can then attach the link again to the complete spreadsheet.

Pamela - what do you think about providing exactly what's on the website in a spreadsheet format and note the 3 data points above MCLs? I'm just thinking that we lose some context to the data if we don't provide the non-detects. We can also send the sampling plan which just has the list of what we sampled for.

I think they are looking for over the MCL levels. Let me double check with staffer. I know you only want to do this exercise once. Thanks.

Pamela - hopefully just one more question...

When they ask for anything above a "safe threshold", do you think they're looking for anything over an MCL? Or, do you think they're interested in anything highlighted in the table (in yellow) as over the "trigger level" for the project? (The trigger levels were set below drinking water standards to flag them for expedited tox review - they're not necessarily indications of levels above a safe threshold.)

Thanks - just want to be sure we pull the right data the first time.

Just to confirm - this is EPA's sampling data they're asking for?
(i.e., not the data from DEP/Cabot we evaluated to decide to take an action).
Thanks!

Since this is hearing prep, they probably want tomorrow or Thursday at the latest.

Pamela - let me check. What's your timeline for getting back to them?

Thanks!

Subject: Committee Request

Thanks Jennie -

I just got a request from House Committee on Oversight and Government Reform, Subcommittee on Technology, Information Policy, Intergovernmental Relations and Procurement Reform staff. They want to know if we have a more user friendly version of the data summary. Something that just lists the contaminants above the safe thresholds. Thanks
